

## Multipartite systems

- Suppose  $|v_1\rangle \in \mathbb{C}^m, |v_2\rangle \in \mathbb{C}^n$  are quantum state. Then the  $|v_1\rangle \otimes |v_2\rangle = |v_1 v_2\rangle$  is a **composite state** (**uncorrelated state**) in the bipartite system.

- For example,  $|v_1\rangle = \begin{bmatrix} a_1 \\ a_2 \end{bmatrix}, |v_2\rangle = \begin{bmatrix} b_1 \\ b_2 \end{bmatrix}$ , then

$$|v_1\rangle \otimes |v_2\rangle = |v_1\rangle |v_2\rangle = |v_1 v_2\rangle = \begin{bmatrix} a_1 |v_2\rangle \\ a_2 |v_2\rangle \end{bmatrix} = \begin{bmatrix} a_1 b_1 \\ a_1 b_2 \\ a_2 b_1 \\ a_2 b_2 \end{bmatrix}.$$

- A state  $|v\rangle \in \mathbb{C}^m \otimes \mathbb{C}^n$  is **entangled** if it is not a composite state.
- The orthonormal basis  $\{|00\rangle, |01\rangle, |10\rangle, |11\rangle\}$  for  $\mathbb{C}^4 = \mathbb{C}^2 \otimes \mathbb{C}^2$  consists of decomposable states.

- The orthonormal basis

$$\left\{ \frac{1}{\sqrt{2}}(|00\rangle + |11\rangle), \frac{1}{\sqrt{2}}(|00\rangle - |11\rangle), \frac{1}{\sqrt{2}}(|01\rangle + |10\rangle), \frac{1}{\sqrt{2}}(|01\rangle - |10\rangle) \right\}$$

consists of entangled states known as Bell states.

- Suppose an observable corresponds to the Hermitian matrix with eigenvectors  $|00\rangle, |01\rangle, |10\rangle, |11\rangle$ , say,  $H = \text{diag}(3/2, 1/2, -1/2, -3/2)$ .

Then the measurement of  $\frac{1}{\sqrt{2}}(|00\rangle + |11\rangle)$  will yield  $|00\rangle$  or  $|11\rangle$  each with 50%.

In particular, the first Schrödinger cat is alive (dead) if and only if the second one is alive (dead).

- We can construct **multipartite system** from  $k$  systems to get  $\mathbb{C}^{n_1} \otimes \dots \otimes \mathbb{C}^{n_k} = \mathbb{C}^{n_1 \dots n_k}$ .

- For example,  $\mathbb{C}^2 \otimes \mathbb{C}^2 \otimes \mathbb{C}^2$  is a 3 qubit system.

Handwritten notes and diagrams:

$|0\rangle = \begin{pmatrix} 1 \\ 0 \end{pmatrix}, |1\rangle = \begin{pmatrix} 0 \\ 1 \end{pmatrix}$

$\mathbb{C}^2 \otimes \mathbb{C}^2$

$\begin{pmatrix} x_1 \\ x_2 \\ x_3 \\ x_4 \end{pmatrix} = x_1 |00\rangle + x_2 |01\rangle + x_3 |10\rangle + x_4 |11\rangle$

Diagram showing a grid of boxes representing a multipartite system. The first two boxes are labeled  $|0\rangle, |1\rangle$  and  $|0\rangle, |1\rangle$  respectively. The third box is labeled  $U_1$  and the fourth box is labeled  $U_2$ .

$U = U_1 \dots U_m$

$\begin{pmatrix} | \cdot \rangle \end{pmatrix}$

## Quantum operations on multipartite systems

We focus on qubit systems.

- Local (unitary) operations. If  $U_1, U_2 \in M_2$  are unitary, then  $U_1 \otimes U_2$  is unitary

$$(U_1 \otimes U_2)|v_1 v_2\rangle = |U_1 v_1\rangle |U_2 v_2\rangle.$$

- General  $U \in M_4$  is a product of local unitary gates  $U_1 \otimes U_2$  and controlled unitary gates of the form  $I_2 \oplus V$  and  $V \oplus I_2$ .

- Proof. Let  $U$  be unitary.

Find  $P_1 = U_1 \otimes V_1$  so that  $P_1 U$  has zero  $(4, 1)$  entry.

Find  $P_2 = U_2 \oplus I_2$  so that  $P_2 P_1 U$  has zero  $(4, 1)$  and  $(2, 1)$  entry.

Find  $P_3 = U_3 \otimes I_2$  so that the first column of  $P_3 P_2 P_1 U$  is  $(1, 0, 0, 0)^t$ . Then  $P_2 P_1 = [1] \oplus B$ .

Find  $P_4 = I_2 \oplus V_4$  such that  $P_4 P_3 P_2 P_1 U$  has zero  $(3, 2)$  entry.

Find  $P_5 = U_5 \otimes I_2$  such that  $P_5 \cdots P_1 U = I_2 \oplus V_6$ .

If  $P_6 = I_2 \oplus V_6^\dagger$ , then  $U = P_1^\dagger \cdots P_6^\dagger$ .

- We can represent the operations on a circuit diagrams, and implement the operations using a quantum computers.

See [Nakahara and Ohmi, Chapter 4].

- We only need to check the actions of the quantum operations on measurable states, say,  $|000\rangle, |001\rangle, \dots, |111\rangle$ .
- The standard gates and basic gates might vary from different quantum computer.
- We are working on a research project requiring a decomposition of a unitary  $U \in M_8$  into simple unitary gates.

## Mixed states and density matrices

A system is in a mixed state if there is a probability  $p_i$  that the system is in state  $|x_i\rangle$  for  $i = 1, \dots, N$ .

If  $N = 1$ , then the system is in pure state.

Consider an observable corresponds to the Hermitian matrix  $A$ .

- The mean value of the quantum system with quantum state  $|x\rangle$  is given by  $\langle A \rangle = \langle x | A | x \rangle$ .

- The mean value of the quantum system with a mixed state  $\sum_{j=1}^N p_j |x_j\rangle$  is given by

$$\langle A \rangle = \sum_{j=1}^N p_j \langle x_j | A | x_j \rangle = \text{tr}(A\rho) = \text{tr}(\rho A),$$

where

$$\rho = \sum_{j=1}^N p_j |x_j\rangle \langle x_j|$$

is a density operator (matrix).

## Description of quantum systems in mixed states.

A1' A physical state is specified by a density matrix  $\rho : \mathcal{H} \rightarrow \mathcal{H}$ , which is positive semidefinite with trace equal to one.

A2' The mean value of an observable associate with the Hermitian matrix  $A$  is  $\langle A \rangle = \text{tr}(\rho A)$ .

A3' The temporal evolution of the density matrix is given by the Liouville-von Neumann equation

$$i\hbar \frac{d}{dt} \rho = [H, \rho] = H\rho - \rho H,$$

where  $H$  is the system Hamiltonian.

$$|x\rangle = \begin{pmatrix} x_1 \\ x_2 \\ x_3 \\ x_4 \end{pmatrix} \quad \begin{matrix} |x_1|^2 & |x_2|^2 & |x_3|^2 & |x_4|^2 \\ 100 & 10 & 10 & 10 \end{matrix}$$

$$A = \begin{pmatrix} a_{11} & a_{12} & a_{13} & a_{14} \\ a_{21} & a_{22} & a_{23} & a_{24} \\ a_{31} & a_{32} & a_{33} & a_{34} \\ a_{41} & a_{42} & a_{43} & a_{44} \end{pmatrix}$$

$$A = \begin{pmatrix} x_1 & x_2 & x_3 & x_4 \\ x_2 & x_1 & x_4 & x_3 \\ x_3 & x_4 & x_1 & x_2 \\ x_4 & x_3 & x_2 & x_1 \end{pmatrix}$$

$$U^\dagger A U = \begin{bmatrix} a_1 & 0 \\ 0 & a_n \end{bmatrix}$$

$$U^\dagger A U = \begin{bmatrix} a_1 & 0 \\ 0 & a_n \end{bmatrix}$$

$$U^\dagger A U = \begin{bmatrix} a_1 & 0 \\ 0 & a_n \end{bmatrix}$$

$$U^\dagger A U = \begin{bmatrix} a_1 & 0 \\ 0 & a_n \end{bmatrix}$$

$$U^\dagger A U = \begin{bmatrix} a_1 & 0 \\ 0 & a_n \end{bmatrix}$$

$$U^\dagger A U = \begin{bmatrix} a_1 & 0 \\ 0 & a_n \end{bmatrix}$$

$$U^\dagger A U = \begin{bmatrix} a_1 & 0 \\ 0 & a_n \end{bmatrix}$$

$$U^\dagger A U = \begin{bmatrix} a_1 & 0 \\ 0 & a_n \end{bmatrix}$$

$$U^\dagger A U = \begin{bmatrix} a_1 & 0 \\ 0 & a_n \end{bmatrix}$$

$$U^\dagger A U = \begin{bmatrix} a_1 & 0 \\ 0 & a_n \end{bmatrix}$$

$$U^\dagger A U = \begin{bmatrix} a_1 & 0 \\ 0 & a_n \end{bmatrix}$$

$$U^\dagger A U = \begin{bmatrix} a_1 & 0 \\ 0 & a_n \end{bmatrix}$$

$$U^\dagger A U = \begin{bmatrix} a_1 & 0 \\ 0 & a_n \end{bmatrix}$$

$$U^\dagger A U = \begin{bmatrix} a_1 & 0 \\ 0 & a_n \end{bmatrix}$$

$$U^\dagger A U = \begin{bmatrix} a_1 & 0 \\ 0 & a_n \end{bmatrix}$$

$$p_1 |x_1\rangle + p_2 |x_2\rangle + \dots + p_N |x_N\rangle$$

$$p_1 |x_1\rangle + p_2 |x_2\rangle + \dots + p_N |x_N\rangle$$

$$p_1 |x_1\rangle + p_2 |x_2\rangle + \dots + p_N |x_N\rangle$$

$$p_1 |x_1\rangle + p_2 |x_2\rangle + \dots + p_N |x_N\rangle$$

$$p_1 |x_1\rangle + p_2 |x_2\rangle + \dots + p_N |x_N\rangle$$

$$p_1 |x_1\rangle + p_2 |x_2\rangle + \dots + p_N |x_N\rangle$$

$$p_1 |x_1\rangle + p_2 |x_2\rangle + \dots + p_N |x_N\rangle$$

$$p_1 |x_1\rangle + p_2 |x_2\rangle + \dots + p_N |x_N\rangle$$

$$p_1 |x_1\rangle + p_2 |x_2\rangle + \dots + p_N |x_N\rangle$$

$$p_1 |x_1\rangle + p_2 |x_2\rangle + \dots + p_N |x_N\rangle$$

$$p_1 |x_1\rangle + p_2 |x_2\rangle + \dots + p_N |x_N\rangle$$

$$p_1 |x_1\rangle + p_2 |x_2\rangle + \dots + p_N |x_N\rangle$$

$$p_1 |x_1\rangle + p_2 |x_2\rangle + \dots + p_N |x_N\rangle$$

$$p_1 |x_1\rangle + p_2 |x_2\rangle + \dots + p_N |x_N\rangle$$

$$p_1 |x_1\rangle + p_2 |x_2\rangle + \dots + p_N |x_N\rangle$$

$$\rho = \sum_i |x_i\rangle \langle x_i|$$

## Multipartite systems

- Let  $\rho_1 \in M_{n_1}, \rho_2 \in M_{n_2}$  be mixed states. Then

$$\rho_1 \otimes \rho_2 \in M_{n_1} \otimes M_{n_2} \equiv M_{n_1 n_2}$$

is a composite (uncorrelated) state in the bipartite system.

- General states  $\rho$  in  $M_{n_1} \otimes M_{n_2}$  are density matrices in  $M_{n_1 n_2}$ .

- Let  $\rho$  be a density matrix in the bipartite system  $M_{n_1} \otimes M_{n_2}$ . It is **separable** if it is a probabilistic (convex) combination of composite state, i.e.,

$$\rho = \sum_{j=1}^N p_j \sigma_j \otimes \tau_j$$

with quantum states  $\sigma_j \in M_{n_1}, \tau_j \in M_{n_2}$

- Otherwise, it is **entangled**.
- Note that  $\rho$  is always a **linear combination** of composite states.
- Checking whether a state is separable is an NP-hard problem.

- A common test is to use the **partial transposes** defined by

$$(\rho_1 \otimes \rho_2)^{pt_1} = \rho_1^t \otimes \rho_2, \quad (\rho_1 \otimes \rho_2)^{pt_2} = \rho_1 \otimes \rho_2^t.$$

- If  $\rho$  is separable, then the partial transposes are also quantum states, i.e., positive semi-definite.

- If  $\rho$  is a state such that  $\rho^{pt_1}$  is positive semidefinite, we say that  $\rho$  is a ppt (positive partial trace) state.

- Question:

Determine all possible norm, eigenvalues, etc., of ppt states,

- One can extend the concepts to multipartite systems.

$$\begin{matrix} 100 \\ 2 \end{matrix} \rightarrow \begin{matrix} 1000 \\ 10 \end{matrix}$$

$$2 \left| \frac{1}{\sqrt{2}} \right\rangle = \frac{1}{\sqrt{2}} (|x_1\rangle + |x_2\rangle)$$

$$M_2 \otimes M_3 = \begin{pmatrix} a_{11} & a_{12} \\ a_{21} & a_{22} \end{pmatrix} \otimes B = \begin{pmatrix} a_{11}B & a_{12}B \\ a_{21}B & a_{22}B \end{pmatrix}$$

$$M_2 \otimes M_3 = M_6$$

$$\rho_1 \otimes \rho_2$$

$$\begin{matrix} |00\rangle \\ |01\rangle \\ |10\rangle \\ |11\rangle \end{matrix}$$

$$\begin{bmatrix} 1 & 0 \\ 0 & 0 \end{bmatrix} \begin{bmatrix} 1 & 1 \\ 1 & 0 \end{bmatrix} = \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}$$

$$\begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$$

$$17n_1 n_2$$

$$\begin{bmatrix} 1 & 1 \\ 1 & 1 \end{bmatrix}$$

$$\begin{bmatrix} 1 & 1 \\ 1 & 1 \end{bmatrix}$$

$$\rho^{pt_1} = \begin{pmatrix} \rho_{11} & \rho_{12} & \rho_{13} \\ \rho_{21} & \rho_{22} & \rho_{23} \\ \rho_{31} & \rho_{32} & \rho_{33} \end{pmatrix}$$

$$\rho^{pt_1} = \begin{pmatrix} \rho_{11} & \rho_{12} & \rho_{13} \\ \rho_{21} & \rho_{22} & \rho_{23} \\ \rho_{31} & \rho_{32} & \rho_{33} \end{pmatrix}$$

$$\rho = \begin{pmatrix} \rho_{11} & \rho_{12} & \rho_{13} \\ \rho_{21} & \rho_{22} & \rho_{23} \\ \rho_{31} & \rho_{32} & \rho_{33} \end{pmatrix}$$

$$\rho^{pt_1} = \begin{pmatrix} \rho_{11} & \rho_{12} & \rho_{13} \\ \rho_{21} & \rho_{22} & \rho_{23} \\ \rho_{31} & \rho_{32} & \rho_{33} \end{pmatrix}$$

$$\mathcal{B}_4 = \{ \rho_i \otimes \rho_j : 1 \leq i, j \leq 4 \}$$

$$\rho^{pt_1} = \begin{pmatrix} \rho_{11} & \rho_{12} & \rho_{13} \\ \rho_{21} & \rho_{22} & \rho_{23} \\ \rho_{31} & \rho_{32} & \rho_{33} \end{pmatrix}$$
